US Soft Tissue Upper Back (01/08/2026 10:54 AM EST)

ANATOMICAL REGION	LATERALITY	MODALITY
Chest		Ultrasound

SPECIMEN (SOURCE)	ANATOMICAL LOCATION / LATERALITY	COLLECTION METHOD / VOLUME	COLLECTION TIME	RECEIVED TIME
			01/08/2026 11:47 AM EST	

IMPRESSIONS

01/08/2026 11:49 AM EST

IMPRESSION:

Findings most consistent with a lipoma in the right thorax.

Electronically Signed by: James O'Brien MD, FACR on 1/8/2026 11:49 AM

NARRATIVE

01/08/2026 11:49 AM EST

HISTORY: right upper back subcutaneous mass

COMPARISON: None.

TECHNIQUE: US SOFT TISSUE UPPER BACK

FINDINGS:

Ultrasound in the area of the patient's palpable finding in the right thorax posteriorly was performed. The subcutaneous fat in this location is asymmetrically prominent. This measures about 1.8 cm in AP dimension, and 6.7 cm in maximal transverse thickness.

No fluid collection or edema.

RESULTING AGENCY COMMENT

PACMJ0LYP27

SURGICAL PATHOLOGY REPORT

Accession Number CG25-18466
Date Received: 12/05/2025
Date Signed: 12/11/2025

FINAL DIAGNOSIS

A. COLON, SIGMOID, POLYPECTOMY:
- Findings consistent with early goblet cell rich-type hyperplastic polyp.
- Negative for dysplasia or malignancy.

B. COLON, ASCENDING, POLYPECTOMY:
- Tubular adenoma.
- Negative for high-grade dysplasia or malignancy.

INDICATIONS/MEDICAL HISTORY

(ABNORMAL) Cologuard Stool (01/22/2023 8:14 AM EST)

COMPONENT	VALUE	REF RANGE	TEST METHOD	ANALYSIS TIME	PERFORMED AT	PATHOLOGIST SIGNATURE
COLOGUARD	Positive (A)	Negative		01/28/2023 12:36 AM EST	EXACT SCIENCES LABORATORIES (CLIA #:52D2162828)	

Comment:
POSITIVE TEST RESULT. A positive Cologuard result should be followed with a colonoscopy or visual examination of the colon. The normal value (reference range) for this assay is negative.
TEST DESCRIPTION: Composite algorithmic analysis of stool DNA-biomarkers with hemoglobin immunoassay. Quantitative values of individual biomarkers are not reportable and are not associated with individual biomarker result reference ranges. Cologuard is intended for colorectal cancer screening of adults of either sex, 45 years or older, who are at average-risk for colorectal cancer (CRC). Cologuard has been approved for use by the U.S. FDA. The performance of Cologuard was established in a cross sectional study of average-risk adults aged 50-84. Cologuard performance in patients ages 45 to 49 years was estimated by sub-group analysis of near-age groups. Colonoscopies performed for a positive result may find as the most clinically significant lesion: colorectal cancer [4.0%], advanced adenoma (including sessile serrated polyps greater than or equal to 1cm diameter) [20%] or non- advanced adenoma [31%]; or no colorectal neoplasia [45%]. These estimates are derived from a prospective cross-sectional screening study of 10,000 individuals at average risk for colorectal cancer who were screened with both Cologuard and colonoscopy. (Imperiale

COMPONENT	VALUE	REF RANGE	TEST METHOD	ANALYSIS TIME	PERFORMED AT	PATHOLOGIST SIGNATURE
T. et al, N Engl J Med 2014;370(14):1286-1297.) Cologuard may produce a false negative or false positive result (no colorectal cancer or precancerous polyp present at colonoscopy follow up). A negative Cologuard test result does not guarantee the absence of CRC or advanced adenoma (pre-cancer). The current Cologuard screening interval is every 3 years. (American Cancer Society and U.S. Multi-Society Task Force). Cologuard performance data in a 10,000 patient pivotal study using colonoscopy as the reference method can be accessed at the following location: www.exactlabs.com/results. Additional description of the Cologuard test process, warnings and precautions can be found at www.cologuard.com.
